

Retail Mobile Inventory

Mobile Inventory Transactions for Stores & Warehouses

NEW VERSION 4

**Retail Mobile Inventory is now available for:
Windows Mobile, and
Apple iOS devices**

Capture Inventory transactions on a handheld scanner and send them to Retail Pro[®] 8 and 9

- Organize scans into “Sessions” on the device
- Upload your Sessions to Retail Pro when ready
- Auditable: all Sessions are date & time stamped
- Store multiple Sessions on the mobile device
- Easy Mobile Interface: a stylus is not required

- Physical Inventory supports both Open and Blind Counting methods
- Inventory transactions are processed into Retail Pro using Retail Pro’s SmartScan interface
- Transaction discrepancies are handled in Retail Pro, which allows you to remove or fix any potential bad scans
- A Retail Mobile Inventory software license includes FoundryLogic’s Retail Mobile Suite software platform that runs on your network. It provides data integration for the mobile devices to Retail Pro
- If you have a WiFi device and wish to use WiFi, you can upload your Sessions to a workstation without having to physically “dock” the device with a cable

Inventory Check & Label Printing

- Scan Retail Pro barcodes (Item numbers, ALUs, and UPCs) to retrieve Item information on the mobile device
- Use “Inventory Check” to search and verify Item information such as: Price, On-Hand Quantity, Size, and Color
- Windows Mobile devices can also Print Labels with a mobile Bluetooth printer

Purchase Information

Contact your Retail Pro Business Partner™ to install a complete system in your stores!
